

## Become a robot master in just 3 steps.

### Robot Controller **MRC01**

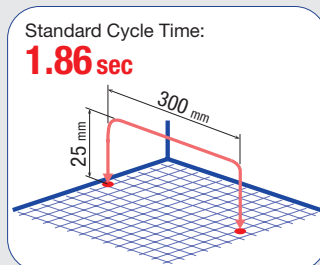

The MRC01 robot controller supports easy programming and control of in-house designed custom built robots with 3 simple steps: "Initial Setup", "Operation Programming" and "Operational Checking".  
Use the **αSTEP AZ Series** family of products to support your in-house design for improved performance and ease of use.

### ■ Easily Introduce Custom-built Robots to Existing Systems

The connection between the **MRC01** and host system is controlled directly via EtherNet/IP™. Custom-built robots can be added easily, without the need to make major changes to the control system from the existing equipment.

### Vertically Articulated Robot Load Mass 1 kg Standard Cycle Time for Reciprocating Motion (Reference value)

# Easy Setup Even for Beginners

The "Programming Software **MRC Studio**" has been prepared to simplify setting up custom-built robots from the initial setting step to the operation programming step.

A trial version of the programming software is also available to allow customers the chance to experience the operation of the **MRC01** before purchase.

\*The **MRC Studio** software and EDS files can be downloaded from the Oriental Motor website.

## Step1. Easy Setup with Step by Step Guidance

Initial settings are made using a wizard to select the robot type and input mechanism information.

By following the guidance instructions while looking at the illustrations, even absolute beginners can quickly set up a robot's initial settings.

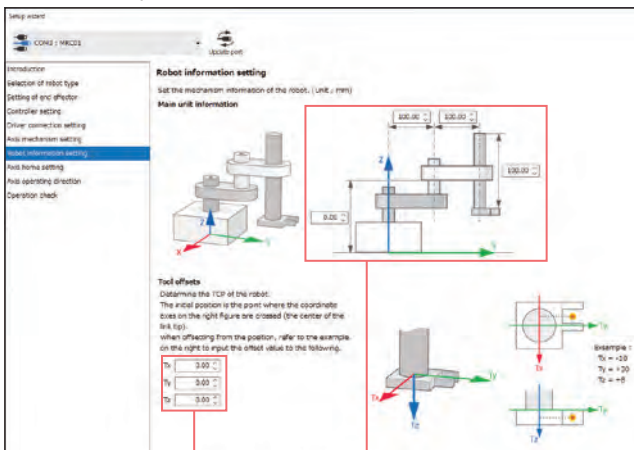

### Follow the Steps to Set Up

Proceed through initial setting of the robot by following the wizard menu.

### Input Dimensions (Arm length, etc.) With the Help of the Illustration

Dimensions are entered directly into the input spaces on the illustrations.

### Select the Robot Type

#### ORIM VEXTA Robot

4-axis articulated robot arms from ORIM VEXTA are supported. Please refer to the ORIM VEXTA website for details.

Refer to the operating manual for details on supported robots. Operating manuals can be downloaded from the Oriental Motor website.

## Step2. Say Goodbye to Ladder Logic! Select Items to Program Operation.

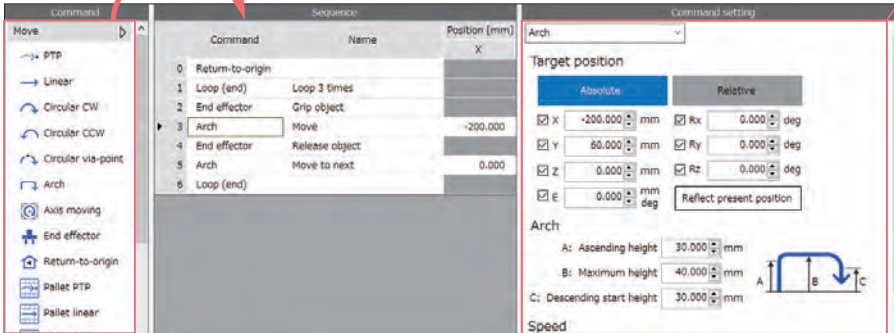

Program creation uses a simple command selection format. Programs can be created intuitively, without requiring specialized knowledge such as ladder diagrams. The system supports P to P operation, linear interpolation operation, circular interpolation operation, arch motion and others.

Operating data is executed directly from a host controller via EtherNet/IP.

● Drag and Drop the Required Commands

● Target Position and Speed Setting

Select the necessary action from the "Command" column, drag and drop into the "Sequence" column, then the "Command Setting" column is displayed.

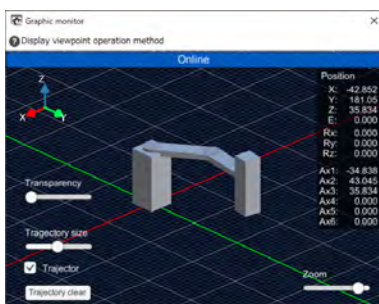

## Step3. Check Operation with an Online 3D Simulator.

The robot's operation program can be checked using a 3D simulator.

The program can be checked easily before the actual robot is activated.

\*Cannot be used offline.

## Standard Cycle Time (Reference Value)

The standard cycle time (reference value) is the time required for reciprocating operation of 25 mm vertically and 300 mm horizontally with a load mass of 1 kg.

### Note

The standard cycle time (reference value) is the data obtained by our in-house robot measured under the operating conditions where the torque of each axis is sufficient for the load mass. Cycle time depends on your operating conditions.

## Positioning Distance – Positioning Time (Reference Value)

The positioning time (reference) can be checked from the positioning distance.

The positioning time depends on the load mass.
